

How to clean 2020 to current cup holders

1. Carefully, using a small flat blade screwdriver, pry up the lens on the cup holder. Work around the outside of the cup holder for an even lift.

2. Lift the lens approximately $\frac{1}{4}$ to $\frac{3}{8}$ of an inch. ***Do not lift higher as the reflector may drop down inside the cabinet.
3. Using a Q tip, wipe under the edges of the cup holder and gasket to clean up the mold and mildew. Try to get the areas as dry as possible.
4. Complete the cleaning by pressing the cup holder lens back into the shell opening. Make sure the lens and the gasket are together tightly and flush with the shell.
